GhostBridge Wireless Ethernet Bridge

The GhostBridge Wireless Ethernet Bridge has zero setup or configuration. All settings are preconfigured for a true-out-of-the-box plug and play experience. Simply unplug your existing Ethernet cable and create a wireless point-to-point link between devices or networks.

Once plugging in the GhostBridge, the LED's highlight what strength you are currently receiving. There is a traffic light system - going from red to green stating what the best signal strength is.

The device automatically detects where the best signal strength is and harnesses it to provide maximum performance.

It offers ultra high-speeds and long ranges. It can offer up to 15km range and a speed of up to 150Mbps, you won't experience latency or throughput bottlenecks.

Plug and play devices are notorious for their lack of security. However, the GhostBridge has taken security very seriously and incorporated WPA2, 128-bit security for a highly secure point-to-point operation.

Some specifications of the GhostBridge:

- Preconfigured with WPA2 128-bit security
- Maximum data rate: 150Mbps
- Distance of up to 15km
- Integrated sector antenna
- Ethernet connectors: RJ45, auto MDI/MDX
- Power 8W includes 2x 24V PoE injector adapters for AC and DC Power.
- Temperature range: -30 to +80
- Casing: Outdoor, UV stable Plastic
- Integrated Pole Mounting
- Shipped in preconfigured pairs
- Optional wall mount kit sold separately

"Our buildings are scattered throughout the town, Ghostbridge allowed us to create a network between them without the expensive lines. The amazing part is it's configuration free."
